

EUROPEAN APPLE AND PEAR CROP FORECAST

AUGUST 2009

August 2009

FOREWORD

WAPA, the World Apple and Pear Association is pleased to provide the 2009 European apple and pear crop estimate. This data will be released on the occasion of the 33rd Prognosfruit Conference, which will take place in Maastricht, The Netherlands from 6-8 August 2009.

This report is compiled upon the initiative of the apple and pear Working Group of COPA COGECA. The data has been collected with the useful support of the respective representative national producer organisations of the various Member States of the European Union and beyond.

In regard to 2009, this report concludes that apple production in the EU for the 21 top producing countries contributing to this report will decrease by 7 % compared to the previous year, corresponding to a production of 10.753.000T. This production is however 4 % above the average for the last three years. In regard to varieties, Golden Delicious production will be down by 4%% to 2.407.000T. Gala will be stable (-1%) at 1.037.000T. Jonagold will be down by 14% at 688.000T while Red Delicious will stand at 662.000T, a decrease by 11% compared to last year.

Regarding pears, European growers predict a higher crop compared to 2008. Indeed, it is reported that the total crop in 2009 will increase by 16 % on that of last year to reach 2.521.000 T, compared to 2008 production which reached 2.178.000T. This figure relates to the production of the top 18 Member States of the EU-27 growing pears and contributing with their data to this report. The 2009 forecasted crop is 2 % higher than the average crop of the last three years. In 2009, the Conference variety will see its production increased by 36% to 856.000T, William BC will be down by 3% to 296.000 T, while Abate F will increase by 12 % to 277.000T.

This report also provides information regarding stock trends and trends on the percentage of production intended for processing in selected Member States.

Besides information provided by the representative organisations, this report is further completed by additional data regarding historic production data for the other EU Member States as well as for a number of relevant countries outside the border of the European Union, including the forecasted data for EU neighbouring countries and the USA. The Southern Hemisphere crop forecasts as initially released by WAPA in Berlin (February 2009) are also updated and presented in a summary format as well as their trade patterns for the export season 2009.

Important comments on the report:

- All crop data presented in this report are in metric tonnes (MT).
- Data are rounded to the nearest '000T. Roundings could influence % of variation in particular in case of low production levels.
- Data are those collected by the representative producer organisations of the respective countries. Data usually reflect the commercial volume of production and therefore does not include own garden production. These data could therefore also be different from those as collected by FAO.
- When there is no reporting organisation, data included in this report relates to the information collected from FAOSTAT. This information is added to extend the scope of the report and to give a more comprehensive overview of the situation.
- The list of varieties has been established on the basis of the recommendation of the apple and pear WG of COPA COGECA. If a variety is not specifically specified, it is then reported into the category "other".
- In regard to the 2009 data, please note that Bulgaria failed this year to submit information. Consequently, for purpose of comparison, we have repeated for 2009 the data made available for 2008. Concerning the USA, the official apples data will be made available on 20-21 August 2009 at the 2009 US Apple Crop Outlook Conference. The data as included in this report are therefore provisional and might change. For apples, the breakdown by variety is not yet available and therefore was extrapolated from last year's breakdown.
