EUROPEAN APPLE AND PEAR CROP FORECAST

AUGUST 2015

August 2015

FOREWORD

Dear Prognosfruit participant,

WAPA, the World Apple and Pear Association, is pleased to provide in this report the 2015 European apple and pear crop estimate. This data will be released on the occasion of the 39th Prognosfruit Conference, which takes place in Merano, Italy from 5-7 August 2015.

This report is compiled upon the initiative of the apple and pear Working Group of COPA COGECA. The data has been collected with the useful support of the respective representative national producer organisations of the various Member States of the European Union and beyond.

In regard to 2015, this report concludes that apple production in the EU for the 21 top producing countries contributing to this report will decrease by 5% compared to the previous year, corresponding to a production of 11.974.000 T. This production is however 7% higher than the average for the last three years. In regard to varieties, Golden Delicious production will be down by 5% to 2.546.000 T. Gala will remain stable at 1.331.000 T. Idared will be down by 7% at 1.111.000 T, while Red Delicious is also down by 5% reaching 644.000 T.

Regarding pears, European growers predict a lower crop down 3% compared to the previous year. The total crop in 2015 will reach 2.343.000 T. This figure relates to the production of the top 19 Member States of the EU-28 growing pears and contributing with their data to this report. The 2015 forecasted crop is however 6% higher than the average crop of the last three years. In 2015, the Conference variety will see its production decrease by 2% to 934.000 T, Abate F will also decrease by 7% to 334.000 T, and William BC will decrease by 5% to reach 262.000 T.

This report also provides information regarding stock trends during the last season.

Besides information provided by the representative organisations, this report is further completed by additional data regarding historic production data for the other EU Member States as well as for a number of relevant countries outside the border of the European Union, including the forecasted data for EU neighbouring countries and the USA. The Southern Hemisphere crop forecasts as initially released by WAPA in Berlin (February 2015) are also updated and presented in a summary format.

Important comments on the report:

- All crop data presented in this report are in metric tonnes (MT).
- Data are rounded to the nearest '000T. Rounding could influence % of variation in particular in case of low production levels.
- Data are those collected by the representative producer organisations of the respective countries. Data usually reflect the commercial volume of production and therefore does not include own garden production. These data could therefore also be different from those as collected by FAO.
- When there is no reporting organisation, data included in this report relates to the information collected from FAOSTAT and/or EUROSTAT databases. This information is added to extend the scope of the report and to give a more comprehensive overview of the situation.
- The list of varieties has been established on the basis of the recommendation of the apple and pear Working Group of COPA COGECA. If a variety is not specifically specified, it is then reported into the category “other”.
- Concerning the USA, the official apples data will be made available on 20 – 21 August 2015 at the US Apple Crop Outlook Conference in Chicago. The data as included in this report are therefore provisional and could be subject to change. For apples, the breakdown by variety is not yet available and therefore was extrapolated from an average of the previous five years' breakdown.

TABLE OF CONTENTS

The report contains the following sections:

Foreword	13
