

EUROPEAN APPLE AND PEAR CROP FORECAST

AUGUST 2011

August 2011

FOREWORD

WAPA, the World Apple and Pear Association, is pleased to provide the 2011 European apple and pear crop estimate. This data will be released on the occasion of the 35th Prognosfruit Conference, which will take place in Ljubljana, Slovenia from 4-6 August 2011.

This report is compiled upon the initiative of the apple and pear Working Group of COPA COGECA. The data has been collected with the useful support of the respective representative national producer organisations of the various Member States of the European Union and beyond.

In regard to 2011, this report concludes that apple production in the EU for the 21 top producing countries contributing to this report will increase by 5% compared to the previous year, corresponding to a production of 10.195.000T. This production is however a 5% lower than the average for the last three years. In regard to varieties, Golden Delicious production will be up by 5% to 2.533.000T. Gala will increase by 7% to 1.059.000T. Jonagold will be up by 14% at 594.000T, while Red Delicious will decrease by 4% to 635.000T.

Regarding pears, European growers predict a higher crop by 12% compared to 2010. Indeed, it is reported that the total crop in 2011 will reach 2.533.000T, compared to 2010 production which reached 2.264.000T. This figure relates to the production of the top 18 Member States of the EU-27 growing pears and contributing with their data to this report. The 2011 forecasted crop is 8% higher than the average crop of the last three years. In 2011, the Conference variety will see its production increased by 8% to 889.000T, William BC will be up by 8% to 307.000T, and Abate F will also increase by 66% to 370.000T.

This report also provides information regarding stock trends during the last season.

Besides information provided by the representative organisations, this report is further completed by additional data regarding historic production data for the other EU Member States as well as for a number of relevant countries outside the border of the European Union, including the forecasted data for EU neighbouring countries and the USA. The Southern Hemisphere crop forecasts as initially released by WAPA in Berlin (February 2011) are also updated and presented in a summary format.

Important comments on the report:

- All crop data presented in this report are in metric tonnes (MT).
- Data are rounded to the nearest '000T. Rounding could influence % of variation in particular in case of low production levels.
- Data are those collected by the representative producer organisations of the respective countries. Data usually reflect the commercial volume of production and therefore does not include own garden production. These data could therefore also be different from those as collected by FAO.
- When there is no reporting organisation, data included in this report relates to the information collected from FAOSTAT. This information is added to extend the scope of the report and to give a more comprehensive overview of the situation.
- The list of varieties has been established on the basis of the recommendation of the apple and pear WG of COPA COGECA. If a variety is not specifically specified, it is then reported into the category "other".
- In regard to the 2011 data, please note that Bulgaria failed once again this year to submit information. For purpose of comparison, we have repeated for 2011 the data available for 2010.
- Concerning the USA, the official apples data will be made available on 18-19 August 2011 at the 2011 US Apple Crop Outlook Conference. The data as included in this report are therefore provisional and might change. For apples, the breakdown by variety is not yet available and therefore was extrapolated from last year's breakdown.
