August 2017

FOREWORD

Dear Prognosfruit participant,

WAPA, the World Apple and Pear Association, is pleased to provide in this report the 2017 European apple and pear crop estimate. This data has been released during the Prognosfruit Conference, which takes place in Lleida, Spain from 9-11 August 2017.

This report is compiled upon the initiative of the apple and pear working group of Copa-Cogeca. The data has been collected with the useful support of the respective representative national producer organisations of the various Member States of the European Union and beyond.

With regards to 2017, this report concludes that apple production in the EU for the 21 top producing countries contributing to this report will be the lowest of the last decade. With a decrease by 21% compared to the previous year, the 2017 crop is estimated to be at 9.343.000 T. This production is also lower than the 3 years average by 23%. In regard to varieties, the main variety, Golden Delicious, will be down by 18% to 1.982.000 T, which is also the lower figure of the decade. Gala also decreased by 3% at 1.276.000 T. Idared will be down by 30% at 679.000 T, while Red Delicious is also down by 9% reaching 576.000 T.

Regarding pears, European growers predict a crop very similar to last year, only down by 1% compared to the previous year but 8% down compared to the last three years. The total crop in 2017 will reach 2.148.000 T. This figure relates to the production of the top 19 Member States of the EU-28 growing pears and contributing with their data to this report. In 2017, the Conference variety will see its production decrease by 7% to 844.000 T, while Abate F will increase by 12% to 332.000 T, and William BC will decrease by 6% to reach 247.000 T.

This report also provides information regarding the stock trends during the last season.

Besides information provided by the representative organisations, this report is further completed by additional data regarding historic production data for the other EU Member States, as well as for a number of relevant countries outside the border of the European Union, including the forecasted data for EU neighbouring countries and the USA. The Southern Hemisphere crop forecasts as initially released by WAPA in Berlin (February 2017) are also updated and presented in a summary format.

Important comments on the report:

- All crop data presented in this report are in metric tonnes (MT).
- Data are rounded to the nearest '000T. Rounding could influence % of variation in particular in case of low production levels.
- Data are collected by the representative producer organisations of the respective countries. Data usually reflect the commercial volume of production and therefore does not include own garden production.
- When there is no reporting organisation, data included in this report relates to the information collected from FAOSTAT and/or EUROSTAT databases. This information is added to extend the scope of the report and to give a more comprehensive overview of the situation.
- The list of varieties has been established on the basis of the recommendation of the apple and pear working group of Copa-Cogeca. If a variety is not specifically mentioned in the list, it is then reported into the 'other' category. Prognosfruit is making all its efforts to provide during the presentation more information on the category "other" and "other new" for a better understanding of what is behind the figure.
- Concerning the USA, the official apple data will be made available during the US Apple Crop Outlook Conference on 24-25 August 2017 in Chicago. The data as included in this report are therefore provisional and could be subject to change. For apples, the breakdown by variety is not yet available with the Premier USDA announcements (made by States) and therefore the variety breakdown was extrapolated from the share breakdown of the previous year.
- The report is compiled with the intention of being presented at the Annual Prognosfruit conference. The data are provided by each country's representative apple and pear organisation(s). Since it refers to commercial data, the data can be different from official national statistics. Moreover, the data presented in this report will be subject to change depending on evolving weather conditions, due to picking and packing and/or general crop and market developments.
- Data are elaborated by WAPA for the Prognosfruit conference. Data are collected and processed professionally to be presented to the industry as reported, with the greatest level of accuracy, with total neutrality, integrity and independence. WAPA cannot be held liable for any misuse of the data nor held responsible of any interpretations by individual operators or by the market as a whole of the impact of the crop estimates. There are indeed many different factors that could impact the evolution of the market throughout a season.
- This report is presented with an industry commitment to transparency.
